Box No. IV Text of the abstract (Continuation of item 5 of the first sheet)

Recorded material such as video is transmitted in compressed form to a receiver (3), which has a buffer (32) for smoothing differences between the data rate received and that consumed by a decoder (33) that follows. The whole of the recording is analysed to determine a point at which to commence playing such that no buffer underflow can occur; the decoder commences playing only when this point has been reached.
